

# Homework 5

CS 4364/5364  
Spring 2022

Due: 30 March 2022

**(10 points)** This homework is not technical, therefore students do not need to submit their responses using L<sup>A</sup>T<sub>E</sub>X, but they should submit a PDF or plain text file (`.txt`, not a Word Document or other file types).

We want to start thinking about the final project, and begin the process of selecting a topic for discussion. To help with this, please answer the following questions (note there are no wrong answers):

1. What topic (or topics) from the foundational concepts (first half of the class) have you found to be most interesting?
2. What is it about this (these) topic(s) make it (them) stand out?
3. Is there an aspect of the topic(s) you want to know more about?
4. (optional) Using the list of computational biology topics<sup>1</sup> from the Computational Biology Wikipedia Project as a guide, are there any projects related to your answers above that you are considering?
