Homework 8

CS 4364/5364
Spring 2022

Due: 27 April 2022
note there will be a technical homework assigned on Tuesday

(10 points) This homework is not technical, therefore students do not ned to submit their responses using LATEX, but they should submit a PDF or plain text file (`.txt`, not a Word Document or other file types). If you are working as a group *each person in the group must submit **the same** file to blackboard.*

We want to start thinking about the final project, and what work you will be completing (possibly as a group).

1. If the page is already existing, what is missing and/or how is the current content lacking?

2. What structural changes will you be making to the page (if it is new, what is the structure you will be implementing)?

3. What content will you be adding (and if a group who will be accomplishing each element)?

4. Where are you looking to add primary sources (i.e. textbook chapters/websites that will lead you to primary literature)?

5. What related pages will you be linking to within your new article?
